TOUCHFREE WATER FILLING STATION

A brand new design concept

# UNICO

Versatile and safe featuring A.I. or "TouchFree". The water you want, without even touching the controls!

Each tap delivers a type of water as indicated by the matching icon: hot, room temperature, cold natural and cold sparkling.

**Unico** finds its natural setting wherever a water fountain is most required and most needed: waiting rooms, hotel lobbies, refreshment points or areas with a large influx of passing people such as airports".

You can fill your own water bottle or container in a hygienic, practical and fast way, without coming into contact with the dispensing point.

Maximum bottle height:  
**cm 31.8**

## Water dispensing

The user can choose the type of water they want amongst the range the dispenser is supplied with. The four clear and intuitive icons (Hot Water, Room Temperature, Cold Water and Sparkling Water) are always visible thanks to the **2 displays** each tap is supplied with.

Once you have chosen the dispensing point, you can place your glass, water bottle or container, and easily fill it "Touch Free", using the automatic **A.I.** mode or via the IR sensor in **Touchfree mode**.

Unico can be remotely monitored and controlled via **Wi-Fi / Ethernet**

## The technology: A.I.

Just place the bottle and **Unico** automatically fills your bottle. It automatically stops when it is full, avoiding unwanted water leakage.

**Proximity sensor**  
to detect the user presence.

**Led lights**  
to illuminate the dispensing area.

## TouchFree activation

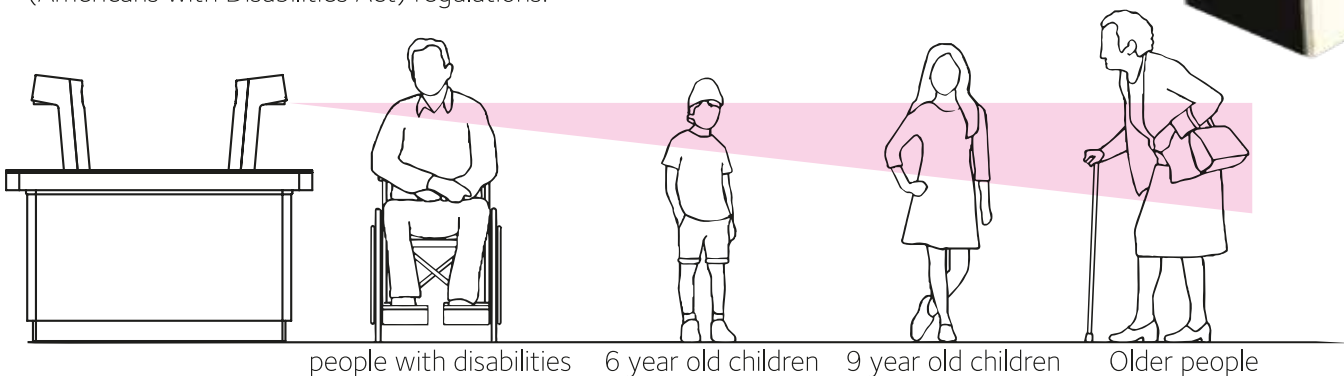

As an alternative to A.I. technology, **Unico** dispensing point can work with the innovative **TouchFree system**, keeping your water free from possible contamination. For everyone's safety reducing the proliferation of bacteria and viruses is now our focus more than ever before.

Carry out the process, which is completely "touch free", by following very simple and intuitive instructions provided through the 4.3 "front **Display** at 9:16, and bring your hand close to the IR sensor located on the side.

## ADA compliance

The activation sensor is located at a height of about 120 cm, suiting people with disabilities, but stops younger children from using it, in full compliance with the stringent ADA (Americans with Disabilities Act) regulations.

## Drip tray with splashproof V-wire stainless steel grid.

To avoid water leaking, the counter edges are tapered, and the drip tray has been designed with splashproof triangular profiles.

All these measures reduce the chance of wet and slippery floor.

## The materials: corian and much more

The **dispensing head** is made of tempered glass and **corian**, a non-porous material that prevents bacterial proliferation; additionally it is resistant and easy to clean. The **dispensing spout**, the **frame** and the **drip tray** are in stainless steel.

### Corian top.

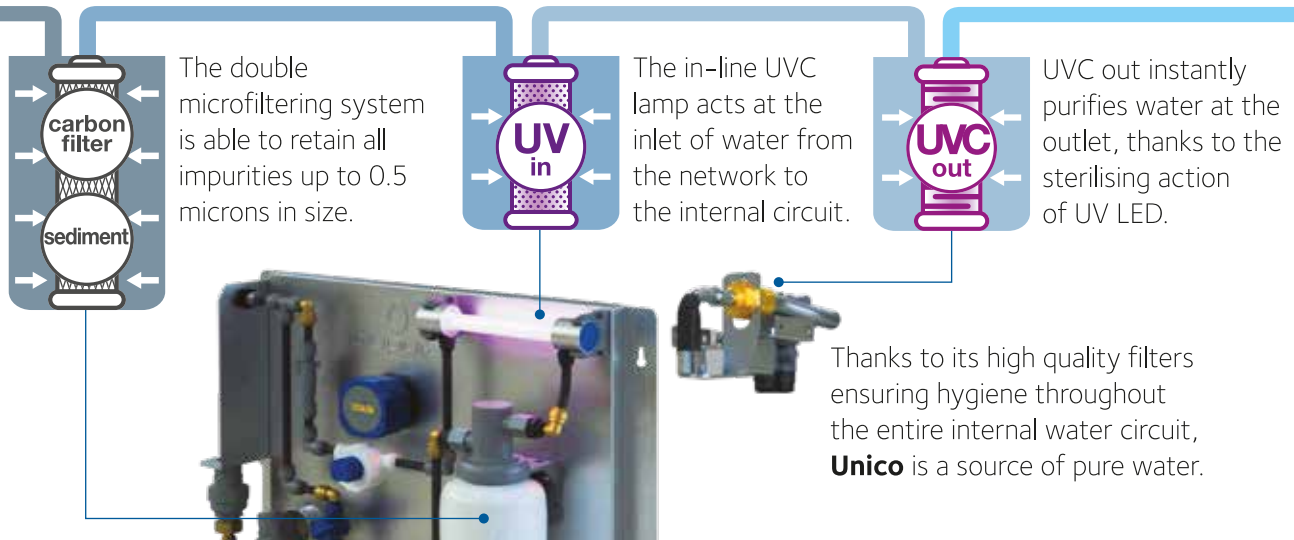

The **panels** and **doors** are made of lacquered marine plywood.

**Skirting** in stainless steel.

## The heart of Unico: the BOX chiller with a delivery capacity of 150 litres / hour.

Here the water is refrigerated and carbonated with a highly professional system, made of **3 stages** that make the water clear, crystalline and odourless.

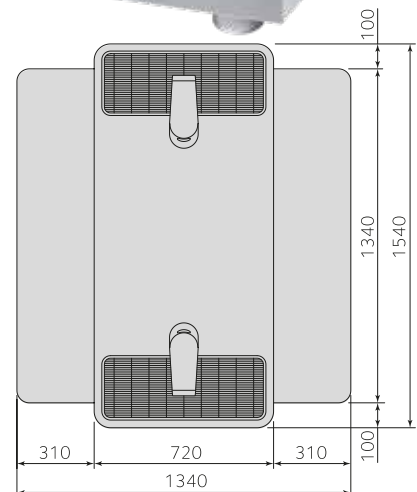

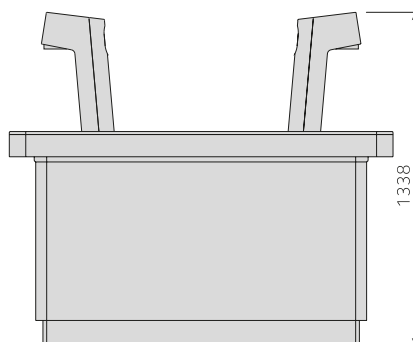

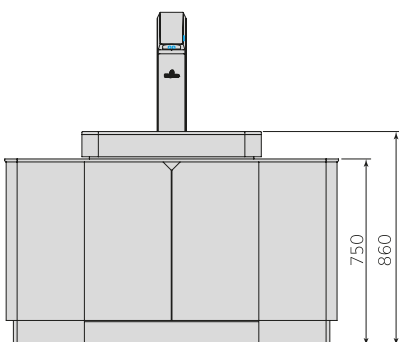

### Natural refrigerant gases

Use of totally natural refrigerant gases (HC) such as R290. An ecological choice, with the bonus of a quieter operation of the compressor ensuring a longer lifecycle of the entire refrigerating system.

### Dimensions

# UNICO

Intelligenza Artificiale (AI)

Innovative technologies ideally combine **sensors**, **vision systems**, **audio systems** and **A.I. algorithms** to achieve the perfect autonomous operation of **Unico**:

- Container detection (bottle presence / absence);
  - Bottle centering avoiding water spillage
  - Automatic bottle filling.
- Dispensing stops when the bottle is full.
